Title: Continuous Release Reporting Regulations (CRRR) Under CERCLA 1980 (Renewal)

A brief statement of Section 103(a) of CERCLA, as amended, requires that the person in charge of a vessel or facility to immediately notify the National Response Center (NRC) of a hazardous substance release into the environment if the amount of the release equals or exceeds the substance’s reportable quantity (RQ). The RQ of every hazardous substance can be found in Table 302.4 of 40 CFR 302.4.

Section 103(f)(2) of CERCLA provides facilities relief from this per-occurrence notification requirement if the hazardous substance release is at or above the RQ is continuous and stable in intensity and rate. Under the Continuous Release Reporting Requirements (CRRR), to report such a release as a continuous release you must make an initial telephone call to the NRC, an initial written report to the EPA Region, and, if the source and chemical composition of the continuous release do not change and the level of the continuous release does not significantly increase, a follow-up written report to the EPA Region one year after submission of the initial written report. If the source or chemical composition of the previously reported continuous release changes, notifying the NRC and EPA Region of a change in the source or composition of the release is required. Further, a significant increase in the level of the previously reported continuous release must be reported immediately to the NRC according to section 103(a) of CERCLA. Finally, any change in information submitted in support of a continuous release notification must be reported to the EPA Region.

The reporting of a hazardous substance release that is equal to or above the substance’s RQ allows the Federal government to determine whether a Federal response action is required to control or mitigate any potential adverse effects to public health or welfare or the environment.

The continuous release of hazardous substance information collected under CERCLA section 103(f)(2) is also available to EPA program offices and other Federal agencies who use the information to evaluate the potential need for additional regulations, new permitting requirements for specific substances or sources, or improved emergency response planning. State and local government authorities and facilities subject to the CRRR use release information for purposes of local emergency response planning. Members of the public, who have access to release information through the Freedom of Information Act, may request release information for purposes of maintaining an awareness of what types of releases are occurring in different localities and what actions, if any, are being taken to
